

# LABEL AUTOMATION SUITE

SOFTWARE SOLUTION FOR AUTOMATED LABEL PRINTING

**More automation**

✓ Higher productivity thanks to high automation of time-consuming manual work

**Higher quality**

✓ Fully automated check of incoming print files and subsequent normalization for a trouble-free, errorless print run

**More time savings**

✓ Increased throughput by combining multi-customer orders in a single collect run and thus less downtime

**Less costs**

✓ Reduced material cost by eliminating proofs, reducing paper waste and printing collect run production

The perfect interplay between your printing presses and the Label Automation Suite gets you there!

**SCREEN OneVision**

- ✓ **End-to-end system** for production planning and easy processing of complex label workflows → simplify and optimize your entire label workflow from order receipt through to prepress stages and production planning
- ✓ Fully automated **quality check of print files** and **subsequent optimization** for the print run → for interference-free print-runs
- ✓ **Replace time-consuming manual work** by automated job tasks → automatic adjustment/creation of bleed when creating varnish and white masks
- ✓ **Reduced material cost** by eliminating proofs, reducing paper waste and printing collect runs
- ✓ Integrated system with **one, easy to use, web browser interface for all users** → increased overview and transparency
- ✓ **One-stop shop solution:** All software components are developed, supported and serviced\* by OneVision → no third party vendors or time-consuming integration needed
- ✓ **Supports direct output** to HP Indigo, Xeikon, Screen and many more

\*subject to entering into a service agreement

# LABEL AUTOMATION SUITE

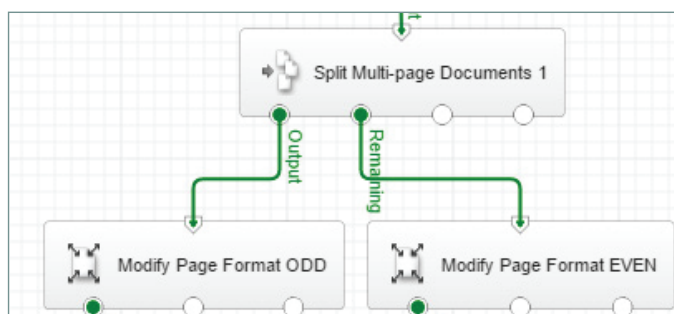

## Overview features and functions:

OneVision's Label Automation Suite is offered in two variants: Access and Pro.

Function:	Label Automation Suite	
	Access	Pro
Workflow Management System: job tickets, metadata based workflows, drag-and-drop workflow editor	✓	✓
Prepress solution: preflight, color management, flattening transparencies, creation of printmarks, normalization, cut spreads, overlay pages, output as images	✓	✓
PDF creation: flexible approval	✓	✓
Cut line manager: accepts all cut line types and names	✓	✓
Auto correction of broken or incomplete cut lines	✓	✓
Create varnish masks, white masks, missing bleed, trappings	✓	✓
Programmable marks	✓	✓
Support of finishing machines: extensive refinement options	✓	✓
Barcode creation to directly control laser cutter	✓	✓
PDF editor: edit PDF files completely at any time	✓	✓
Combination of cross-customer orders in one collective form	✓	✓
Extended prepress solution: merge documents, output as EPS, trim white space, watermarks, find barcodes		✓
Extended file editor: allows more file formats: EPS, PS, image formats; variable data printing; preflight		✓

### Workflow Manager:

Easy integration using either hot folders and/or MIS using job ticketing. Straightforward UI where workflow process can be created as you need it – simple drag and drop. Real time tracking of jobs.

### Finishing Process:

As soon as label requires finishing with hot- or cold-foil, embossing or lacquering the information is read out from the job data. Finishing colors are defined and standardized within the system to ensure an automatic recognition of them.

### Auto-Prepress:

Identifying files that interrupt your production – and cost you money – is still a challenge. OneVision has all the relevant tools in place to identify any issue, to auto-repair typical errors, to color manage the files to the output profile you need, to reliably flatten transparencies, to normalize files (= files are output according to your specific print requirement and compliant to ISO standards ensuring the compatibility with all other hardware and software you might use).

### Design:

Automatic design of die-cuts or laser cutting configurations, white and varnish masks, bleed and much more.
